

Windows Vista/7 DL-FRS 2.4 Patch Installation

This patch prevents the Datalink for FRS v2.4 application from crashing in Windows Vista and Windows 7 when importing maps into the FRS database.

Installation instructions:

- Save the "DatabaseInterface.dll" file to your PC in a easy to find location (i.e. the desktop)
- Windows 32-bit:
Copy the file "DatabaseInterface.dll" to C:\Program Files\DataLink for FRS\
- Windows 64-bit:
Copy the file "DatabaseInterface.dll" to C:\Program Files (x86)\DataLink for FRS\
- Choose to OVERWRITE the existing "DatabaseInterface.dll" file
- Confirm that the "DatabaseInterface.dll" file is version 2.0.0.1 instead of 1.0.0.317
- **IMPORTANT NOTE:** There is a small draw back to this fix. When importing or exporting the PROGRESS TEXT WILL NOT UPDATE as the file imports or exports. The progress bar will still continue to work as it did before, but the text will not update.
